Aptean Food & Beverage ERP

Foundation Bundle

Aptean Food & Beverage ERP Fast Tracked for You

Joining forces with our partners, Aptean proudly presents our ERP Foundation Bundle, meticulously crafted to streamline and accelerate the deployment of the Aptean Food & Beverage ERP solution. Tailored exclusively for small and midsize businesses, this bundle offers a rapid and cost-effective implementation process, effectively reducing the usual obstacles that come with ERP deployments.

❯ **Tailored for Small and Midsize Businesses –** Our bundle is expertly crafted to meet the unique needs and challenges faced by small and midsize businesses in the food and beverage industry.

❯ **Efficiency and Speed –** We understand the importance of time in your business operations. Our solution ensures a rapid implementation process, reducing downtime and disruptions.

❯ **Cost-Effective –** We have optimized the implementation process to make it budget-friendly without compromising on quality.

❯ **Swift and Quality Implementation –** The bundle leverages a streamlined, best practice approach, ensuring a straightforward and hassle-free implementation.

With the Aptean Food & Beverage ERP solution, enjoy a best practice focused implementation that gets you up and running quickly, without compromising on quality.

"The technology has gotten out of the way, and it enables us to really focus on serving more people as efficiently and cost effectively and safely as possible. That's our future." -Cheif Techonology Officer, GA Foods

Contact your Account Executive today to receive more details via the Professional Services Description document.

Aptean Food & Beverage Applications

❯ **Advanced Pricing** – Support more complex pricing scenarios like hierarchical pricing (multiple pricing tiers that span different customer groups and even individual customers).

❯ **Expiration Management** – Effectively manage expiration dates, ensure compliance with inventory requirements, and make data-driven decisions to optimize operations.

❯ **Inspection Status** – Successfully manage and control the flow of lots within the warehouse. By assigning an inspection status to a lot, its status becomes clear before allocating it to a production order, sales order or any other transaction.

❯ **Lot Management** – Lot profile definition tools allow the generation of lot numbers according to a variety of elements, such as dates, production machines, item records and vendor information

❯ **Process Manufacturing** – Set up multiple production scenarios for manufacturing items, assign bills of materials and routings, and execute production in a way that best fits business needs.

❯ **Shop Floor Production** – Load ShopFloor onto tablets and other devices, and enjoy the ability to view and record production data directly from the shop floor in real-time

❯ **Quality Control** – Easily create quality checks and execute them on the work floor. This allows direct insight into all results, and deviations that can be immediately converted into actions.

❯ **Mobile Warehouse Registration** – By leveraging the capabilities of mobile devices, companies can streamline data capture, improve accuracy, and enhance efficiency in their warehouse operations.

❯ **Production Planning and Scheduling** – Stop relying on manual planning and scheduling tools. Our scheduling algorithms allow streamlined resource consumption. Centralize information and improve data accuracy across the company

❯ **License Plating** – Trace all logistic transactions to a license plate number throughout the supply chain. License plating is especially effective in environments that utilize mobile data processing in the form of handheld devices with barcode scanning functionality.

❯ **Packaging** – Seamlessly integrate with Business Central order entry processes to provide a consistent way of registering returnable packaging items.

❯ **Labelling** – Set up labels that can be printed from different pages. This makes it possible to print all data from tables within Microsoft Dynamics 365 Business Central on the label.

*Implementation bundles vary, contact your Account Executive to learn more.

dynavics

Dynavics specialise in the design, development, deployment, and support of Microsoft Dynamics 365 Business Central and NAV.
By integrating Aptean's solution with Business Central, Dynavics customers in the food and beverage industry can access best-in-class tools tailored to meet their unique needs, including product traceability, recipe management, and regulatory compliance.
